

P-LOK™

“THE” STRAPLESS MOTORCYCLE LOCK-DOWN SYSTEM

“LOAD & LOCK”

Dear Consumer:

Today with new truck prices starting at \$ 30,000.00, trailers at \$ 10,000.00 PLUS, and motorcycles \$5,000.00 and up the current \$25.00 tie-straps just aren't cutting it ...it is time for **P-LOK™**.

P-LOK™ is a lockable tool system designed specifically for securing your motorcycle(s) during transportation and storage, while also helping to preventing theft. Using the pegs to secure the bike minimizes fork compression. Which increases the fork seal life by up to 300% saving valuable riding-time and money. **P-LOK™** is constructed of more than 14 LBS of solid metal, utilizing aircraft grade 6061 aluminum, stainless steel, and zinc plated hardened steel and is backed by a limited lifetime warranty. The system installs easily in most trucks and trailers and fits most bikes 80cc-500cc. Next time you transport your motorcycle make sure it's **P-LOK™**ed!!

Synergy Racing Technologies “SRT” designs, develops and manufactures every component of their **P-LOK™** System in the United States.

SRT's pledge: HIGHEST QUALITY, AMERICAN MADE motorcycle restraint systems delivered with excellent service for complete customer satisfaction.

Sincerely,

Darrell Saldana
VP Sales & Marketing
